

## How End Users will use GateKeeper

The easiest login experience ever for everyone.

### Just carry your key.

Those 120 username/password combos can be forgotten without worry. If you carry your GateKeeper proximity key or Android phone with you, it will auto-fill your passwords for your PC, Mac, websites, and some applications. The GateKeeper Password Manager will automatically load your credentials on any website. Also, your PC will auto-lock when you leave so no more worrying about leaving your PC unlocked and all the associated risks.

### Logging in without Passwords.

End users will see the new GateKeeper lock screen after installing the Client app. Admins can choose to let users also use their Windows password or not. Users login through with

- Presence
- Presence + Touch
- Presence + Press Enter
- Presence + Password

### Proximity sensors – best spots to place them.

Just like any card or fingerprint reader, the Bluetooth USB proximity sensors will continue to scan for the presence of nearby keys to determine who is logging in. Place one sensor above your desk to get maximum coverage and another under your desk to ensure that the key's signal is received even when sitting down. Use the wire manage clips and USB extension cords.
