

Approach your patient's computer with your new password caddie.

PROXIMITY LOCK AND UNLOCK

Login and out seamlessly with your presence.

WITH GATEKEEPER

BEFORE GATEKEEPER

Computer automatically authenticates you.
No more typing long, mandated passwords.
Typing credentials is eliminated.

Type a long, mandated password.
Sometimes you forget your password, sometimes you mistype.

All work reopens on any PC you move to.
When you leave one PC and move to another, your saved session opens back up — saving maximum time.

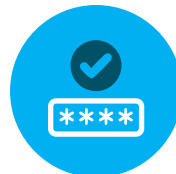

Reopen everything that you need to access to do your job.
Every time you go to a different computer, you have to repeatedly reopen your work — wasting time.

All passwords auto-fill on websites.
No more typing usernames and passwords on any website. Your passwords will be available on any computer you use.

Log in again, every time you move computers.
Remember credentials, type username and password dozens of times a day.

100% rate of correct passwords.
Automated passwords never fail and are never incorrect. Save lots of time.

"Forgot Password" and "Password Reset"
IT helpdesk and users spend too much wasted time waiting for resetting passwords.

Auto-locks computer when leaving.
Automatic lock when the user leaves — minimizing the threat window drastically.

Must remember to manually lock computer to meet compliance.
Everyone forgets to lock their computer. Especially in hospitals, this leaves PHI vulnerable to exposure.
